## COTTON PLANTING SEED

(80% GERMINATION OR BETTER)

\* \* \* \* \*

CALIFORNIA PRODUCED SEED

These seed were produced in 1957 from Deltapine 15 in Imperial County, California, and missed the wet weather. Consequently, germination qualities of these seed are very good. Field-selected by our representative and ginned on clean gins, these seed have a high degree of varietal purity.

Retail Price      \$185.00 Per Ton

NATIVE GROWN SEED

Produced in areas of Tennessee and Mississippi where Deltapine 15 is the predominant variety, these seed are of very high planting quality, but may be mixed with other medium staple varieties.

Retail Price      \$170.00 Per Ton

\* \* \* \* \*

All prices are F.O.B. Greenville, Mississippi.

Seed mechanically delinted and treated with recommended seed protectant.

Packed in even-weight 100 pound burlap bags.

卷之三十一

## International Conference on the Future of the Internet

Chlorophyll content and light use efficiency were also measured. Light use efficiency was calculated as the ratio of the total amount of light energy absorbed by the plant to the total amount of light energy received by the plant. Light use efficiency was calculated as the ratio of the total amount of light energy absorbed by the plant to the total amount of light energy received by the plant.
